

### Abstract of the Disclosure

An electronic appliance comprises two image capture units, for which switching between flashlights  
5 is considered. When switching is made between the two image capture units, switching is also automatically made between the mobile lights. When shooting is made with the first image capture unit, the first mobile light serves as a flashlight. When shooting is made by  
10 switching from the first image capture unit to the second image capture unit, the second mobile light serves as a flashlight. When shooting is made with both of the first and the second image capture units, both of the first and the second mobile lights serve as flashlights.
